

WRITING DIRECTIONS

In these exercises, you must examine the figure in the box very carefully. Use the lines provided to write a set of directions for drawing each figure. Write the directions carefully so that a classmate could draw the figure from your directions without seeing the figure.

45 Sample Answer

B-37 Construct a rectangle figure three times as long as it is high by connecting three squares. Use the tops of the two squares on the right as the base of a right triangle. The height of the triangle should be the same as the length of its base. The line forming the triangle height should be on the right.

B-38 Draw a large square. Divide the square into two equal rectangles by drawing a vertical line down the center. Divide the left rectangle into two small rectangles by drawing another centered vertical line. Divide the remaining large rectangle on the right into two squares.
